\*\*\* High Risk for Strong Winds NE and E Areas Monday- Wednesday \*\*\*

A low pressure trough will begin to drop into the North Ops region from the Eastern Gulf of Alaska today. Isolated thunderstorms are possible late today in far northern and eastern areas, but the chances are quite low. The main fire weather issue from this incoming trough will be increasing SW to W winds today, which may gusts to 17-22 mph late this afternoon over exposed areas.

By Sunday these winds will be out of the S to SW with gusts over higher terrain reaching 20-28 mph. These winds will further increase Monday and Tuesday to 25-32 mph out of the SE to SW, with the Weed, CA area being a particular concern, as the trough deepens and forms a cutoff low just offshore. There is a remote chance of isolated showers or thunderstorms each afternoon across the far northern and eastern ends of the North Ops region through Wednesday.

Late on Thursday the low will move NE into SW OR, clipping the far NW corner of CA.

There is a chance of showers or thunderstorms north of a line from Cape Mendocino to

McCloud to Goose Lake late Thursday. Friday will be warmer and drier with winds

becoming light out of the west.
